MARCH 2020

BP's AMBITIOUS NET ZERO BY 2050

McFall Fuel's Zero Harm Value which expanded is no harm to people, no harm to the environment, no accidents has been recently enhanced when it comes to no harm to the environment by BP's aim to achieve net zero on carbon in BP's oil and gas production on an absolute basis by 2050 or sooner. There are 10 aims five of which are aimed at helping BP to get to net zero and the other five at helping the world to do the same. As part of this ambition BP have launched a new team to help countries, cities, and large companies decarbonize as well as more active advocacy for policies that support net zero, including advocacy for carbon pricing.

that support net zero, including advocacy for carbon pricing.

The reality is that we all want energy that is reliable and affordable but now the cry is for it to be cleaner. To achieve what is wanted will cost trillions of dollars and so BP's purpose of reimagining energy for people and our planet means that there has to be some significant financial pain to make the environmental gains possible. Net zero means directly addressing all of the carbon that comes out of the ground as well as the greenhouse gases emitted from operations. This aim will not be achieved without the support of everyone who uses energy. The first step for BP is to reduce their emissions by halving the carbon intensity of the products it sells by 2050 or sooner. This means the consumers should have more and better choices of low and no carbon products. Further to this by 2023 methane measurement will be installed at all BP major oil and gas processing sites with the aim of reducing the methane intensity of its operations by 50%. Debi Boffa, Managing Director of BP Oil NZ Ltd said, "our focus will be on how we can do more to meet the world's demand for more energy with less emissions. This is the biggest change to BP's global operations in a century, and these changes will take time to implement."

DROUGHT AND CORONAVIRUS CHALLENGES

McFall Fuel like so many businesses is faced with the uncertainties that come with the drought as well as coronavirus. The drought situation is impacting severely on the rural communities and while we know that we rebound from droughts the question is always when, for those customers in the ag sector who have been most affected.

When it comes to Coronavirus the initial reaction was in the forestry sector that it might not impact for too long. However, as the virus has spread and now has reached New Zealand it is thought that the initial impact may run for longer and affect the forestry sector strongly with log imports slowing. Again a rebound is predicted but the question is yet again when?

Some workplaces have begun thinking about implementing taking employees temperatures each day prior to starting work as a preventative measure.

MARCH SEES STRONG INVOLVEMENT IN MANAWATU

Central Districts Field Days

The McFall Fuel Team along with Roger Refill are looking forward to having you join them on site at the Central Districts Fielddays. "We have come up with the ideal challenge for which prizes can be won," said Area Sales Manager Steve Wellwood.

"It will be exciting to see who can match Roger Refill's expertise at the pumpover as can be viewed on www.mcfallfuel.co.nz/news There will be prizes for different categories for children."

"The NZ Rural Games Trust is thrilled to welcome McFall Fuel on board as the naming rights sponsor for the prestigious championship of NZ Speed Shearing. A great family weekend of traditional sports, entertainment and heaps of opportunities to have a go and entry is free. The synergy between this important rural fuel supplier and this entertaining shearing event is obvious. We look

forward to working closely with McFall Fuel in years to come," said Steve Hollander.

What's Happening @ McFall Fuel

TANK CERTIFICATIONS NEED TO BE KEPT UP TO DATE

HAZCHEM 3YE PETROL UN No. 1203

EXTREMELY FLAMMABLE LIQUID AND VAPOUR
KEEP AWAY FROM IGNITION SOURCES
- NO OPEN FLAME - NO SMOKING
IN THE CASE OF FIRE CALL 111

ECOTOXIC TO AQUATIC LIFE - CONTAIN SPILLS, PROTECT WATERWAYS
IN CASE OF SPILL CALL REGIONAL COUNCIL POLLUTION HOTLINE [0900]

Customers can help prepare for Tank Certifications by following the guidelines for Stationary Container Test Certificates and Location Test Certificates. The great majority of tanks we have on customer sites are diesel and any diesel tank equal or greater than 5000 litres must have a Stationary Test Certificate. All tanks connected to a burner, generator, or boiler also require a Stationary Test Certificate. The trigger point for a diesel burner is 60 litres and burners must be registered with WorkSafe. For a diesel generator the trigger is 500 litres. Full records need

to be kept of all maintenance and repairs carried out on the boiler and associated fittings, controls, alarms and pipework. Every boiler needs to have a main isolator or emergency stop switch, which shuts down the burner. Emergency Response Plans also need to be in place. "There is quite a list of 'must haves' for tanks to achieve compliance and we are very keen to help customers achieve these," said Logan Fleming, BDM Tank Compliance. "Distances from boundary lines, site plans, the correct Hazchem Signage, and fire extinguishers are on our checklist among many other things to help customers meet the needs of certification."

Location Test Certificates for petrol apply to on ground tanks larger than 2,000 litres on farms and 50 litres is the trigger point on Commercial sites.

BP STAFF VISIT MCFALL FUEL

McFall Fuel and BP Oil NZ Limited have been looking at ways to strengthen the supplier relationship and to build a greater

understanding of the way McFall Fuel operate. McFall Fuel Training & Safety Manager Mike Crandon and Jessica Milich, BP's Terminals & Logistics Assurance Manager, saw the opportunity to bring a large group of BP staff down to Mount Maunganui as a positive way to start creating a better understanding of the work carried out by one of BP's fuel distributors.

"The BP staff were amazed by the scope of the business which sees schedulers coping with such a range of delivery locations such as forestry, construction, farm, bunkers, transport, and commercial sites for example. The processing of trips and the challenges faced by Amanda Lawson and Diane Whitmarsh who manage this was also an eye opener. It was also exciting to learn about the history of the company and how it has grown. The energy of the people and the atmosphere as we shared lunch is very much a reflection of the family culture you have," said Jess. "It is always great to have face to face catch ups."

TWO M TRIPLE F EVENINGS IN TWO MONTHS

The M TRIPLE F Evenings are not only a great way for the Team to catch up with customers but also provide the chance share more information about the lubricant technology available in the market place. The first event for 2020 was held in the Fitzroy Surf Club in New Plymouth on February 25 and the next event will be held at Solway Park Copthorne in Masterton on March 25. "We had a good turnout and a number of questions about lubricant applications and the family story is always a hit with our customers," said Andrew Sorensen BDM for Taranaki.
